

Pressure gauges for regulators and filter-regulators Series C, MC, M and N

3

Different scales

Connections: radial, rear, for panel mounting

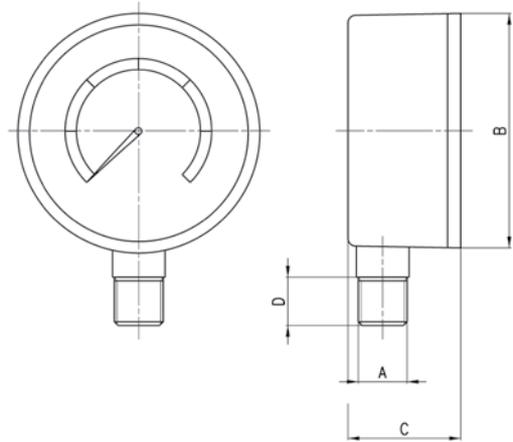

Precision class CL 1,6

Information for the correct choice of the pressure gauge. The measurement range of the pressure gauge should be chosen considering the type of application following these criteria:

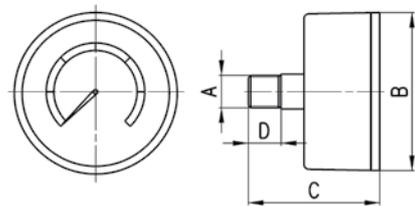

- constant pressure or with slow fluctuations should be within 75% of the maximum scale value.
- pulsing pressure or rapid fluctuations should be within 65% of the maximum scale value.
- pressure peaks should never exceed the maximum scale value.
