

# WATER OIL COOLER

Oiltech PWO with cooling capacity 1-480 kW

# OILTECH PWO FOR MAXIMUM CAPACITY

PWO water oil cooler is ideal for use in stationary lubricating systems and hydraulic applications as a minimum of space is required and the heat transfer capacity is very high. The economical PWO water oil cooler can easily be oversized for any future increase in cooling requirements or peak loads.

### WATER OIL COOLER OPERATION

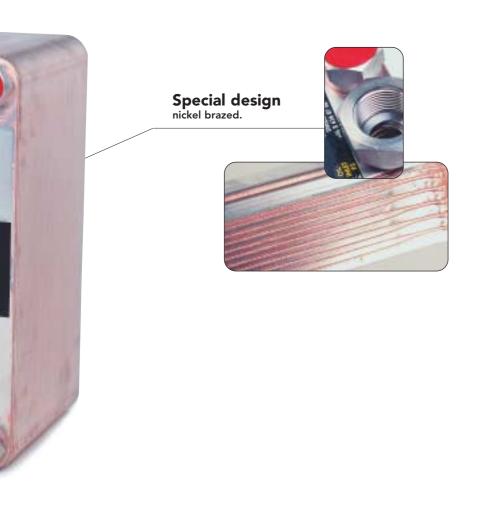

PWO provides an oil temperature very close to the cooling water temperature, eliminating the need for an active cooling system in certain applications.

The unique PWO design features result in a turbulent oil and cooling water flow, the key to high cooling capacity. This

turbulent flow prevents clogging, a frequent cause of reduced heat transfer efficiency. The PWO cooler provides reliable temperature control of oils, a condition for maximum performance.

### **BENEFITS**

- Low water consumption economical in operation
- Turbulent flow prevents clogging reduced maintenance
- Compact small installation dimensions easy assembly
- Broad range excellent technology innovative solutions
- Standard range always on stock delivery at short notice

# Pulp and paper industry

Compact design, reduced maintenance and outstanding heat transfer economy are all important reasons for considering a PWO water oil cooler in your application. Oiltech is

marketing special-made water oil coolers for various pulp and paper industry applications.

## Motor car industry

The PWO water oil cooler has many similarities to the principles in the motor car industry, e.g. adaptability to customers' need with maintained prices, using standard components for special-made products. Oiltech is marketing water oil coolers, adaptable to a wide

range of applications within the motor car industry.

## Consult your

- extreme operating conditions

## SPECIAL-MADE

PWO can be supplied special-made for your unique application, e.g. for use with sea water, aggressive oils or dismountable for use with extremely contaminated water. For further information, consult your local Olaer company.

### **CALCULATE YOUR COOLING REQUIREMENT**

Oiltech has made a calculation programme for the PWO-series. By entering your basic data, you can calculate your cooling requirement and select the ideal oil cooler. Our engineers are at your disposal to support you.

## Steel and metal industry

From heat to cold steel. An immense quantity of thermal energy is required to transform iron ore to casting pigs, sheet metal and tubes. A great deal of this heat is transformed into gas or vapour. Besides, heat is absorbed by the walls of the blast furnace, presses and moulds as well as by the tempered oil, quench water, lubricants and other fluids,

which all require cooling.

Similar conditions prevail when making aluminium, copper and many more metals. Oiltech's highquality water oil cooler provides fast and high-efficient cooling. Our expertise can show you how to re-use this energy, saving money for you at the same time as meeting your requirements.
